

Shade sails are an economical and effective way to cool a large area; over a deck, spa pool or just provide protection over windows and doors. Here at Making Shade Ltd, we specialise in design, manufacturing and installation of your shade sail to the highest standards.

We also use hi-tech 3D software to design your shade sail and make sure it's positioned correctly to give you maximum shade. We fix our shade sails with stainless steel fittings and stainless steel attachments. And to ensure 100% accuracy in fit and tolerance, we do not cut the fabric until our poles are installed and the sail measurements are checked.

HIGH SHADE LEVELS AND FIRE RETARDANT

- **Maximum Shade:** Extrablock has high levels of UPF/UVR/shade to protect you from harmful UV rays.
- **Protection:** Extrablock meets the UPF/UVR/shade levels required for use in educational facilities, kindergartens & preschools.
- **Fire Retardant:** Extrablock offers 8 out of 12 colours in fire retardant making it the perfect choice in public areas, high fire risk areas, areas prone to vandalism, parks and schools.
- **Dimensional Stability:** Extrablock is unique with its high tensile strength as well as its almost equal elongation properties in the wrap and weft.
- **History:** Extrablock is the result of technological abilities and commitment of one of the world's first manufacturers of knitted shade fabric, Alnet (Pty) Ltd.
- **Functionality:** Extrablock is widely regarded around the world and is in use for a wide variety of uses, some of which are: **Tension structures | Shade sales | Umbrellas | Building awnings | Blinds | Gazebos**
